2025 NEW PRODUCT SHOWCASE WINNER
AOPA NATIONAL ASSEMBLY

ALPS SOUTH LINER SPECIALISTS SINCE 1993

ALPS South is an American company which has been specializing in the production of prosthetic liners since 1993. Since then we have expanded globally, with offices in 5 countries, a consolidated network of agents and over 270 trusted distributors spread out all over the world.

Thanks to our dedication to innovation, coupled with our eagerness to interpret and even anticipate the needs of prosthetic technicians and wearers, ALPS has gone far beyond our initial production only of prosthetic liners, and developed a whole range of high-quality prosthetic solutions, including more than 75 registered patents spanning an array of product categories. This catalogue makes it easy to access information about the entire range of ALPS products to identify the best prosthetic solutions based on both the lifestyle and clinical profile of each individual patient.

PREMIUM QUALITY 100% MADE IN USA

Investment in innovation, research and quality, both in terms of products and working methods, continues to be a priority here at ALPS, allowing us to offer premium solutions. The entire production process, from the knitting of fabrics to the manufacturing of the liners, takes place at our St. Petersburg, Florida plant. This means we can assure maximum quality control at every step of production. In addition ALPS guarantees the quality and safety of its products with certification from some of the most important internationally recognized authorizing institutions. ALPS has been manufacturing FDA-approved medical devices since 1989. ALPS products are designed and produced according to ISO13485 and GMP (Good manufacturing practice) standards, meeting the requirements of the EU regulations CEE 93/42 UE and conforming to MDR 2017/745.

ALPS SOUTH

MAKING LIVES BETTER™

“Making Lives Better™” is the mission which has been driving the company since 1988, inspiring our job every day and pushing us to provide superior products for you and for every prosthetics user.

We pride ourselves on our fair business practices with customers, vendors, and employees alike, while maintaining a brand image that makes our staff, collaborators and end-users of our products all proud to be associated with ALPS.

USERS FIRST

When it comes to optimizing prosthetic fit and patient outcomes, liner selection plays a critical role. With a combination of five elastomers, five fabrics, and five suspension options, ALPS offers one of the most versatile and high-performing liner portfolios on the market, designed to meet the diverse needs of patients and technicians.

Throughout the catalog, you'll find a QR code that links to a simple, easy-to-understand overview of the prosthetic liner technologies we offer. This webpage will offer helpful explanations of each elastomer, fabric, and suspension type, empowering you to make informed decisions and select the most appropriate liner solution for every patient.

GEL TECHNOLOGY

ALPS expertise in the field of chemistry and our position as a leading manufacturer of advanced gel-based medical devices have led to the development of a wide range of prosthetic liners and sleeves over the years, characterized by an innovative and unique product: our patented gel.

ALPS Gel offers an optimum level of protection against shear forces and other stresses, guaranteeing the perfect combination of control and uniform distribution of pressure within the socket thanks to its characteristic low modulus of elasticity.

ALPS Gel is far more flexible and resistant with respect to other gels being used in the lower limb prosthetic liner industry. ALPS Gel offers up to six times the elasticity of other gels on the market. It is this important mechanical property that allows ALPS Gel to guarantee prosthetic leg wearers the comfort, durability, control and safety they need to grant them the mobility and freedom of movement.

Four types of ALPS Gels to serve the mobility needs of prosthetic leg wearers

ALPS makes four types of gels to meet the needs of every individual prosthetic leg user whose requirements vary based on their clinical condition and lifestyle : EasyGel, GripGel, HD Gel and OptiGel. The full range of ALPS Gels means that each patient will be able to find his or her own, unique, perfect comfort.

EASYGEL

Soft, powdery texture. It is rich in antioxidants that are an effective scavenger of free radicals and hydroxyl groups. Best for use on amputees with adherent scar tissue, skin irritations, sensitive skin and diabetics.

HIGH DENSITY GEL

Dense, firm texture. Relatively firm nature of the HD Gel combines comfort with control and stability. Recommended for highly active users who are transitioning from a silicone liner to a gel liner.

GRIPGEL

Smooth, tacky texture. Tackiness helps in reducing bunching in the popliteal area. Recommended for users with healthy skin tissue.

OPTIGEL

Exclusive, white gel. Excellent adhesion to the residual limb. Recommended for users who demand ultimate comfort, control, and stability.

OPTIGEL TECHNOLOGY

OptiGel represents a next generation of gel developed for unmatched comfort, stability, and protection.

OptiGel's gentle yet durable formulation enhances the patient experience by reducing pressure, friction, and impact forces, while its compact structure provides excellent strength and stability, improving overall movement control.

CLINICAL BENEFITS

Provides superior comfort and skin protection

Minimizes pressure, friction, and impact

Improves stability and movement control

Adapts to volume changes for a secure fit

Ensures greater durability, also for highly active users

**TRUSTED PERFORMANCE.
PREMIUM RESULTS.**

Explore all OptiGel product solutions.

LINERS	Product Name	Suspension	Thickness	Activity Level	Description
	UltraSeal Gel Liner		3 mm		<p>Integrates advanced sealing technology with the benefits of gel to provide exceptional comfort and conformity to the residual limb.</p> <p>Available in three ring heights: Ultra Low, Low, High.</p>
	Pro-Fit Liner		3 mm 6mm		<p>Provides gentle skin contact and a secure fit around the residual limb.</p>

★ LOCKING STYLE: U-BAND

In combination with the U-band in the locking versions, OptiGel helps reduce pistoning without any distal-end constriction.

SLEEVES	Product Name	Thickness	Activity Level	Description
	Reinforced Flex Sleeve	3 mm		<p>Built with an added layer of internal fabric to offer increased durability around the trim line of the user's socket.</p> <p>Provides a 30° pre-flexion to ease bending and reduce bunching behind the knee.</p>
	Reinforced Straight Sleeve	3 mm		<p>Constructed with an extra layer of internal fabric to deliver superior durability.</p> <p>Provides maximum comfort, control, and high-performance.</p>

KNITTING TECHNOLOGY

The choice of fabric used for producing prosthetic sleeves and liners is fundamental for guaranteeing maximum comfort and safety.

This is why ALPS began manufacturing its own fabrics years ago: to be sure to offer a product that best meets the functional needs of prosthetic wearers. The fabric needs to do more than just protect the materials used in making the liners and extend their durability; it must also be able to generate a greater, lesser or differentiated level of tension depending on the needs of the individual user. ALPS manufactures and uses four types of fabric: beige, brown, black and knitted.

These five types of fabric are not differentiated merely by color and manufacturing process, they also each have distinctive characteristics and functions in order to provide each prosthetic leg wearer with the specific benefits he or she needs based on individual lifestyles and clinical conditions.

BEIGE FABRIC

Beige fabric stretches both vertically and horizontally

The fabric's stretch allows the liner to adapt to the shape of the residual limb as it moves to guarantee maximum comfort.

BROWN FABRIC

Brown fabric has reduced vertical elasticity

Vertical stretch is reduced by 80% compared to the beige fabric, allowing a greater level of control and stability of the prosthesis. Ideal for active patients.

BLACK FABRIC

Black fabric with greatly reduced vertical stretch

Vertical stretch is 90% lower than the beige fabric, allowing a greater level of control and stability of the prosthesis. Ideal for active patients.

GREY FABRIC

Grey fabric with increased reduction of vertical stretch

Minimal vertical stretch allows for a high level of control and freedom of movement. Ideal for active patients.

KNITTED FABRIC

ALPS years of experience in manufacturing fabrics has played a fundamental role in the development of our latest innovation: products created using ALPS knitted fabric.

Our latest fabric manufacturing process has allowed us to:

- Create products totally devoid of any stitching
- Maintain control of the tension in each section of the liner to maximize and reduce the effects of pistoning
- Integrate a matrix in the distal construction of our locking liners
- Integrate a distal matrix to limit elongation / U matrix or Regular Matrix

SILICONE TECHNOLOGY

ALPS® has introduced innovative and skin-friendly silicone prosthetic liners for lower limb amputation.

These liners provide a solution to some of the clinical problems and disadvantages of silicone in skin-contact applications due to the inherently high coefficient of static friction typical of silicone polymers.

ALPS expertise in processing silicone allowed our engineers to come up with a new manufacturing method which improved the friction characteristics of the silicone prosthetic liner.

The surface of the prosthetic liner has been modified, to create micro craters that reduce the static friction without any additives, resulting in a completely skin friendly silicone.

Silicone with the modified surface layer shows a reduction of 80% of the coefficient of static friction, as shown in the graph below.

FRICITION TESTING

ALPS makes two types of silicone to meet the needs of every individual prosthetic leg user.

SILICONE: Comfortable Hypoallergenic Silicone. 1/5 the friction of standard silicone, and completely free from additives. Recommended for users looking for a silicone liner very delicate on the skin.

OPTISIL: Advanced Medical-Grade White Silicone. All features of ALPS Silicone while achieving an enhanced balance of control and comfort; maintains the skin moisturized, cool, and healthy. Recommended for medium and high-activity users who demand ultimate comfort, stability, and support for the skin's natural thermoregulation process.

ALPS silicone is lightweight, hypoallergenic, cool and additive-free and creates only one-fifth the friction of normal silicone. The technology used to create this particular silicone is of fundamental importance, allowing ALPS to design and produce silicone liners for prosthetic legs which can guarantee: freedom of movement, maximum gentleness on the skin, cooling effect and ease of cleaning

Inspired by Nature. Empowered by Technology.

NRG® - Natural Reactive Gait - is a patented innovative dynamic response foot technology designed to replicate the natural movement of the calf and shin muscles.

**ONE FOOT,
MULTIPLE POSSIBILITIES,
INFINITE EMOTIONS**

KEY FEATURES

Unique multilayer construction

Exclusive and patented reverse shank design

Advanced flexible ergonomic design

KEY BENEFITS

- Physiological and energy efficient gait
- Smooth rollover during the whole gait cycle
- High dynamic response to support an active lifestyle
- Possibility to do a wide range of activities with just one single foot
- Ground compliance and stability on all terrains
- Reduction of secondary issues thanks to a more balanced posture and symmetrical gait
- Low maintenance
- Lightweight
- Waterproof

DISTAL END TECHNOLOGY

Our distal end construction delivers a superior, high-quality product that provides the comfort, protection, and durability essential for a successful prosthetic liner.

How we do it.

Our team of engineers works meticulously to ensure that every distal end is constructed to the highest standards, using only the best materials and components.

That's why our prosthetic liners are designed using an **internal distal end construction method** which fuses the three primary liner materials- gel, fabric, and umbrella- on the inside of the liner, instead of being glued on from the outside like many liners available today.

Integrating these materials into a cohesive unit creates a secure anchoring point for the umbrella, ensuring that the liner can easily connect to a prosthetic device without fear of damage or detachment. Not only does this guarantee the reliability of the entire system, but it also provides unparalleled comfort and performance.

4 distal end styles and 6 different construction processes.

Each prosthetic liner falls under 1 of 4 distal end styles, which is determined by umbrella type. The liners within each style are then further grouped based on its internal construction process (i.e., the components used during assembly).

Each of the six construction processes is unique and complex, involving several elements that merge together to create a highly durable structure that caters to the liner's purpose and recommended use.

Refer to the Table on page 35 to view the specs of each distal end style and the components used in their construction.

Distal End Styles		Distal End Construction		Distal End Components

Deep Dive

Style: Choice Construction Process: Pro-Fit

A. Gel

The thickness layer of the OptiGel increases at the distal end to provide cushion. It also embeds the base of the umbrella (B) and helps secure the fabric layers (D, E) in place.

B. Umbrella

An internal metal umbrella makes the liner more secure and durable, as opposed to umbrellas glued externally to the fabric.

C. Grommet

The grommet links and secures both fabric layers together (D, E), forming a solid composite while providing a secure anchoring point for the umbrella.

D. U Band

The U Band prevents distal pistoning while allowing for the expansion of bulbous residual limbs.

E. External Fabric

The external fabric layer protects all internal elements and offers limited vertical stretch to provide a greater level of control and stability of the prosthesis.

F. Encapsulation

The aluminum encapsulation provides a highly durable attachment point to the prosthetic.

LINER TECHNOLOGY

With a combination of five elastomers, five fabrics, and five suspension options, ALPS offers one of the most comprehensive and high-performing liner portfolios in the industry.

Each material is engineered to meet specific clinical and functional needs—from accommodating sensitive skin and residual limb volume changes to supporting high-activity users. This versatility enables prosthetists to select the ideal liner configuration for each patient, ensuring a precise fit, consistent comfort, and reliable suspension across a broad range of activity levels and limb conditions.

5 ELASTOMERS.

We offer five elastomers that function as interfaces between the residual limb and the socket, each designed with unique features to suit various patient needs.

Elastomer Name	Durometer Scale			Antioxidant Count
EasyGel	SOFT	MEDIUM	HARD	
GripGel	SOFT	MEDIUM	HARD	
HD Gel	SOFT	MEDIUM	HARD	N.A.
OptiGel	SOFT	MEDIUM	HARD	N.A.
OptiSil (Silicone)	SOFT	MEDIUM	HARD	N.A.

5 FABRICS.

Our fabric types are indicated by their unique characteristics and functions, offering users specific benefits based on their lifestyles and clinical conditions.

Fabric Type	Elongation (Stretch) Level
Beige	
Brown	
Seamless Knit	
Black	
Gray	

5 SUSPENSIONS.

We provide a range of suspension options to accommodate individual levels.

Suspension Type	Name or Associated Product (ⓘ)	Image	Description
Locking (1)	Reinforced Matrix		Characterized by low vertical and horizontal elongation
Locking (2)	U-Band		Characterized by low vertical elongation
Suction	Cushion		All cushion liners used with sleeves
Elevated Vacuum	 Vacuum Integrated Pump (VIP®)		Air expulsion integrated pump used with sleeves or UltraSeal
Hypobaric	 UltraSeal Liner		Features a sealing ring around the outer portion of the liner

Hypobaric Suspension

HOW ANTIOXIDANTS WORK

ALPS EasyLiner® contains an antioxidant that is an effective scavenger of free radicals and hydroxyl groups.

Beneficial effects to the skin of patients have been reported. These stories have been provided here as anecdotal evidence of the benefits that some patients have reported.

DIABETIC AMPUTEE

Case history provided by: Jim McElhiney, CPO, Nashville (USA).

This patient is a severe diabetic, insulin dependent with compromised vascularization. A local hospital called Jim McElhiney, CPO in Nashville (USA), to evaluate this patient.

The first two pictures have been taken prior to the fitting by Jim McElhiney. The patient had been out of her prosthesis for 3 weeks and was being treated with wet and dry dressing. She was then fitted with ALPS EasyLiner® (Cushion Liner) and ALPS Easysleeve (Sealing Sleeve), creating a suction suspension system.

Before the fitting
with ALPS EasyLiner®.

One week post initial fitting
with ALPS EasyLiner®.

Three weeks post initial fitting
with ALPS EasyLiner®.

CASE STUDY 2

PATIENT WITH DERMATITIS

Case history provided by: Wayne Sadler, CPO, Kentucky (USA).

This patient has been diagnosed with Contact Dermatitis. He followed the simple cleaning procedures as recommended by the manufacturer.

When that wasn't enough, he started using our product, these are the results.

Prior to fitting
with ALPS EasyLiner®.

One week post fitting
with ALPS EasyLiner®.

A DIFFICULT RESIDUAL LIMB

Case history provided by: Palgi Orthopaedic, Israel.

Before, when wearing
a silicone liner.

After, when fitted with
ALPS EasyLiner® during 4 weeks.

PROSTHETIC LINERS

A prosthetic liner serves to cover and protect the residual limb like a second skin and plays a key role in the suspension system of the prosthesis, increasing comfort and minimizing the risk of skin irritations. ALPS complete range of prosthetic liners is designed to focus on the needs of the individual to offer all users the best possible solution based on their specific needs.

SoftSil Liner

Patent No. 11,602,445

ALPS SoftSil Liner delivers the same medical-grade qualities as our popular Silicone Pro but with enhanced features. Made with OptiSil, our new, soft, white silicone, and gray knitted fabric, the liner effectively offers a high degree of control and excellent freedom of movement without sacrificing a comfortable suspension in the user's prostheses.

UltraSeal Silicone Liner

The ALPS® UltraSeal Liner features an integrated band that creates an airtight seal as the user steps into the socket. The liner's smooth inner wall, constructed with OptiSil, a new soft, white silicone, easily conforms to and cushions the residual limb. The silicone, combined with a strongly knitted fabric covering, creates excellent durability and a secure fit.

Key Benefits

Provides a comfortable cushion between the socket and residual limb and optimizes suspension while offering ultimate user convenience for daily use.

Outer knitted fabric combines strength and durability while allowing differentiated stretch and comfortable elasticity.

One sealing ring to ensure a secure hold.
Available at three different heights: Ultra Low, Low, and High.

Medical-grade white silicone that contains 1/5 the friction of regular silicone.

Skin friendly, lightweight, and cooling.

EasyLiner®

Patent No. 6,454,812* | 7,709,570 | 7,709,570

ALPS EasyLiner® contains a prolonged-released antioxidant, an effective scavenger of free radicals and hydroxyl groups, with beneficial effects on the skin.

It provides the softness, strength, and cushioning from its use of ALPS EasyGel, relieving the residual limb from the stress created by vertical and shear forces. It delicately conforms to the shape of the residual limb without restricting blood flow. It can be easily donned even by geriatric patients and users with reduced manual dexterity.

Silicone Pro Liner

Patent No. 5,507,834* | 6,454,812*

The Silicone Pro liner is manufactured with medical grade hypoallergenic silicone. The surface of the silicone features a low coefficient of static friction (1/5 of regular silicone). Without any additives, it is a hypoallergenic liner, very delicate on the skin. The liner is extremely lightweight and promotes the skin's natural thermoregulation.

The locking version features an innovative U matrix to limit vertical stretch while not constraining the residual limb.

Material

Silicone

Superior Performance Liner

Patent No. 6,454,812*

ALPS Superior Performance prosthetic liner combines a limited vertical stretch fabric with our GripGel.

GripGel, with its softness, strength, and cushioning provides the greatest possible protection to the residual limb. The fabric, with its limited vertical elongation, improves control and stability of the prosthetic leg by reducing pistoning. The result is a comfortable liner, indicated for patients with low and medium activity levels.

EasyFlex™ Liner

Patent No. 6,454,812* | 7,709,570 | 8,226,732 | 8,246,694 | 8,349,021

ALPS EasyFlex™ prosthetic liner allows users ease of knee flexion thanks to an unlimited restriction of stretch anteriorly. Posteriorly the fabric, with its limited vertical stretch, improves the control of the prosthetic leg. The prolonged-released antioxidant contained in the EasyGel is an effective scavenger of free radicals and hydroxyl groups, providing beneficial effects on the skin. The EasyFlex™ Liner is designed for use with a pin and lock suspension system.

Key Benefits

Indicated for delicate skin and diabetic patients thanks to the antioxidants contained in the gel

Protects the residual limb thanks to the high capacity of the EasyGel to absorb vertical and shear forces

Further relieves the skin from stress generated by shear forces thanks to its low coefficient of static friction

Allows an easy knee flexion and improves the control of the prosthetic leg, since it has been engineered using two types of fabric with different elasticity

Supplied with distal attachment for pin and lock suspension systems

EasyLiner® SuperStretch

Patent No.7,709,570

ALPS EasyLiner® SuperStretch is a soft, robust and versatile prosthetic liner made of EasyGel without the restriction of a fabric cover.

It allows complete freedom of movement and conforms to irregularly shaped residual limbs without restricting blood flow. Due to the low coefficient of friction of the EasyGel, it relieves the skin from the stress created by shear forces. The prolonged-released antioxidant has beneficial effects on the skin.

Anterior Posterior Tapered Liner

Patent No.6,454,812* | 8,226,732 | 8,246,694 | 8,349,021 | 8,226,732

ALPS AP Tapered Liner is gradually tapered from the thicker anterior to the thinner posterior side to provide freedom of movement to transtibial users.

The 6 mm frontal wall ensures a high level of protection to bony areas. By combining a high density gel with a limited vertical stretch fabric, this liner minimizes soft tissue movement and reduces vertical pistoning, offering a high level of control of the prosthetic leg.

PSI Liner

Patent No.7,709,570 | 8,357,206 | 8,394,150

The PSI Liner improves suspension by sealing onto the sleeves of a transtibial prosthesis. The EasyGel provides comfort and durability, relieving the skin from the stress created by vertical and shear forces. The antioxidant contained in the gel has beneficial effects on the skin.

The PSI Liner can be used in conjunction with current valve suction or vacuum systems being used on the market today.

Liberty™ Liner

Patent No. 6,544,292* | 6,454,812* | 6,361,568* | 8,382,852 | 8,808,394

The Liberty™ Liner allows the expulsion of air and humidity through a built-in valve integrated either on the pin or the reducer, promoting a healthy environment. Used in conjunction with a nylon sheath, it presents a superior capacity for collecting and expelling humidity. The HD gel improves the stability of the prosthetic leg and provides greater protection against vertical and shear forces. It is recommended to minimize the problem of excessive perspiration.

Vacuum Integrated Pump

Patent No. 8,197,555 | 11,224,527 | 8,197,555 | 11,224,527

The ALPS VIP® is an air expulsion integrated pump for elevated vacuum. Its use provides patients continuous total contact when donning the prosthesis. This is essential for an even weight distribution and to distribute the suspension of the prosthesis over the whole surface of the residual limb. Elevated vacuum created by the VIP® stabilizes the residual limb, overcoming all issues connected with the residual limb changing volume during the day.

Key benefits

Efficiently deals with stump volume fluctuation which in turn leads to improved prosthesis control and comfort

Reduces the intensity of peaks in pressure on the patient's limbs, improving comfort and providing greater freedom of movement

Helps preserve residual limb skin health by improving circulation and consequently increasing limb oxygenation

Quiet and light does not affect the cosmetic appearance of the prosthesis

Easy to install and battery-free

Vacuum Integrated Pump VIP® Part Number and optional complementary products.

Available in 2 different vacuum levels: HIGH VACUUM (Red) 10-13 in of mercury and LOW VACUUM (Green) 5-8 in of mercury. Choose vacuum level on the basis of activity level and skin condition.

Prosthetic Socks with Hole

ALPS prosthetic socks are light and soft, extremely comfortable with a perfect fit. They are made with technologically advanced fibers, highly effective in moisture management, that wick away perspiration so it can easily evaporate. This advanced fabric means that socks maintain their original quality for a long time, without getting misshapen or matting up.

Choosing the best sock to suit your needs is easy with ALPS socks' color-coded thickness indicator: blue for 1-ply; 3-ply, yellow; 5-ply, green.

1 ply ● 3 ply ● 5 ply ●

Key Benefits

Assists with volume fluctuation

Keeps its shape over time; minimal stretch and will not mat down

Technical fibers allow a cool, comfortable wear

Light and soft, extremely comfortable

Skin Reliever

The ALPS Skin Reliever eliminates shear forces, friction, and prevents abrasions on the skin of the stump.

It also accommodates volume fluctuations over the life of the prosthesis.

There is no need to make a new socket, ALPS Skin Reliever can be worn under silicone, gel, and pelite liners.

Key Benefits

Reduces shearing and abrasions

High elasticity

Replaces pelite and socks

Softens and soothes the skin

Contains an antioxidant for use on delicate skin

Skin Reliever ENCP. Sizing chart.

Measure the circumference of the stump at 6 cm above the distal end.

MEASURED SIZE (CM)	ENCP 3/1.5MM TAPERED

Cross section

Antioxidant Cream

Patent No. 10,543,167 | 11,478,419

ALPS Antioxidant Cream contains antioxidants that are effective scavengers of free radicals and hydroxyl groups. May assist with soothing pain, itchiness and irritated skin. Can be applied on stumps with sensitive skin as it stimulates skin regeneration process. Its moisturizing power improves skin elasticity.

Recommended for use with all liners.

Key benefits

Soothes Pain, Itch, and Irritation

Stimulates Skin Regeneration

Improves Skin Elasticity

Great for Sensitive Skin

Product Code

PRODUCT NO.	AMOUNT	QUANTITY
ANT-C50	50 ML	x 1
ANT-C50 BX12	50 ML	BOX OF 12

Silicone Skin Lotion

ALPS 100% Silicone Skin Lotion helps to soothe dry, sensitive skin. It is hypoallergenic, with no perfumes or dyes, and minimal residue. Can be used sparingly to relieve dry, cracked skin conditions.

Key benefits

Hypoallergenic and skin friendly: formulated to soothe and hydrate sensitive skins without oily feeling

Simple use: apply a few drops of lotion on the skin or on palm of the hand and massage until completely absorbed

Concentrated: a few drops are enough to relieve dry and cracked skin conditions

Without soap or dyes: 100% free of soaps and dyes that could be aggressive

Product Code

SL 108	118 ML	x 1
SL108 BX12	118 ML	BOX OF 12
SL108-32	944 ML	x 1

Prosthetic Lubricant

ALPS Prosthetic Lubricant is used to help in donning gel and silicone prosthetic liners. It allows the amputee to don the liner or sheath easily while eliminating the sticky feel.

Key benefits

Helps the placement of the liner in the socket

Easy application in 3 fast steps: Turn the liner inside-out - spray the lubricant on the external surface - unroll the liner over the stump

Eliminates the sticky feeling and is recommended for use with all liners

Contains 70% isopropyl alcohol for quick evaporation

Product Code

PRODUCT NO.	AMOUNT	QUANTITY
PA 604	443 ML	x 1
PA 604 BX12	443 ML	BOX OF 12

Prosthetic Cleanser

ALPS Prosthetic Cleanser is a non-alkaline, soap-free cleansing agent designed to help remove dirt and excess perspiration from prosthetic liners and sleeves. Its unique formula allows it to work efficiently with hand washing or machine wash settings to effectively clean and restore items back to their original state.

Key benefits

Developed to remove dirt and excess sweat from prosthetic liners and sleeves, either by hand or in the washing machine. It is recommended for use with all liners

Suitable for sensitive skin: thanks to its delicate formula it can also be applied to the areas of the skin that come into contact with the prosthesis

Without soap or dyes: 100% free of soaps and dyes that could be aggressive

Balanced pH: the non-alkaline silicone-based formula soothes the skin and does not damage the liner.

Product Code

PadSil

The Padsil was developed to increase patient comfort in combination with ALPS liners. The more active user will appreciate the additional cushioning, softness, and durability. Users who experience volume changes will also appreciate the Padsil's ability to lift the limb back into the proper position. They can be placed at the bottom of the socket or inside a pin locking liner.

Key Benefits

Soft medical grade silicone

Helps maintain total contact

Keeps its shape over time

Easily modified

Blue dummy padsils are available for laminating

PadSil PDS. Sizing chart.

ProStride

An intuitive microprocessor prosthetic knee that effortlessly adapts to the patient's gait speed, enhancing mobility and independence.

ProStride™ knee is an advanced artificial joint designed to provide users with an easy-to-use, safe, comfortable, and energy-efficient walking experience.

ProStride™ includes microprocessor technology and a polycentric design, helping users easily initiate the swing phase while conserving energy, adapting to a wide range of walking conditions, and continuously adjusting to users' gait over time.

Activity level

K1

K2 ✓

K3 ✓

K4

Key Benefits

Four-bar pneumatic design.

Allows the instant center of rotation (ICR) trajectory to mimic that of a normal gait pattern.

Microprocessor technology.

Includes **three smart sensors** that automatically calibrate to the patient's gait pattern, making adjustments quick and accurate.

Smart programming.

Thanks to a **user-friendly app**, programming the ProStride can be completed within minutes with just a few simple inputs.

Easy to use.

The ProStride is designed to be user-friendly, enabling practitioners of all experience levels to install and program it efficiently, while users can easily manage it.

Customization options.

In the app, users have the opportunity to easily customize the knee's response to meet a specific activity need (biking, hiking, etc.) without affecting the initial programming settings.

Even the highest performing prosthetic device will be inadequate without a perfect interface with the residual limb to provide comfort all day long.

This is why for almost 30 years ALPS has been dedicated to designing and manufacturing only the highest-quality prosthetic liners to provide users with all the mobility they need.

Thanks to its dedication to innovation, ALPS has developed other high-quality prosthetic solutions in addition to prosthetic liners, inspired by the slogan which has been driving the company since 1988:

Making Lives Better™
